

Team Lab Assignment 2 (Categorical Data Analysis)

Name: _____

Date: _____

The table below is from a sample from a larger data set collected on patients discharged from a selected Pennsylvania hospital as part of a retrospective chart review of antibiotic usage in hospitals.

Table 2.11 Hospital-stay data

ID no.	Duration of hospital stay	Age	Sex 1 = M 2 = F	First temp. following admission	First WBC ($\times 10^3$) following admission	Received antibiotic 1 = yes 2 = no	Received bacterial culture 1 = yes 2 = no	Service 1 = med. 2 = surg.
--------	---------------------------	-----	-----------------------	---------------------------------	---	--	---	----------------------------------

Import the hospital dataset in the SAS to answer the questions below.

Question 1. What is the distribution regarding gender in the dataset? Please provide a contingency table (with count and percent) to show the distribution of the variable. Paste results from SAS here.

Test whether there is an association between whether a patient received bacterial culture and the service the patient received. **Use the information to answer questions 2-4.**

Question 2. Perform a chi-square test and provide the contingency table from the test. Paste results from SAS here.

Question 3. What is the chi-square test statistics?

Question 4. What is the p-value?

Question 5. What is the conclusion?
